If you would like to enroll in either HAS course, please email frances.shaw@stonybrook.edu with your name, Stony Brook ID number and name of the course that you are interested in. You can enroll in the nutrition course directly in SOLAR.

WINTER 2017

HAS 545 Ethics and Health Care* (3 credits)

This course, designed for health care professionals (providers, educators, and managers), provides an overview of the ethics of health care in a rapidly changing society. Students learn how to approach ethical dilemmas using theoretical frameworks and decision-making processes. Ethical issues surrounding health care reform and public health policy, including distribution of resources and rationing of services, are explored. Through the use of case studies, students are introduced to other health topics, such as euthanasia, reproduction, transplants, and HIV/AIDS, from an ethical perspective. The course also includes a review of classic cases in health care ethics and how they have shaped health policy, an overview of patient education and ethics, and a discussion on the professional codes of ethics and standards.

HAS 579 Advanced Seminar in Health Policy* (3 credits)

This seminar is designed to provide students with an in-depth analysis of the principle of health policy-making. Examples from local and national policies are used as a framework for the student to develop an appreciation of the dynamics and complexities of policy making. Furthermore, it is expected that students will be able to synthesize the information gained throughout the course in order to demonstrate competencies in policy composition and dissemination.

HFN 503 Nutrition in the Media: Making Sense of the Science (3 credits)

This 3 credit online course will increase students' awareness of the pervasive nature of food and nutrition messaging and the varied motivations behind them. Basic concepts related to nutrition and food science will be presented along with the skills and resources needed to critically evaluate future issues and trends in nutrition. Topics to be discussed include popular supplements, fad diets, common chronic diseases and related dietary recommendations, sustainable food practices and food labeling. *This course does NOT count toward the Advanced Certificate in Nutrition requirements, but can be used as an elective in the PA PPMP.*
